2025 SESSION

ENROLLED

1 VIRGINIA ACTS OF ASSEMBLY - CHAPTER 2 An Act to amend and reenact § 56-585.5 of the Code of Virginia, relating to electric utilities; accelerated 3 renewable energy buyers; zero-carbon electricity; energy storage resources. 4 [H 1821] 5 Approved Be it enacted by the General Assembly of Virginia: 6 7 1. That § 56-585.5 of the Code of Virginia is amended and reenacted as follows: 8 § 56-585.5. Generation of electricity from renewable and zero carbon sources. 9 A. As used in this section: "Accelerated renewable energy buyer" means a commercial or industrial customer of a Phase I or Phase II 10 Utility, irrespective of generation supplier, with an aggregate load over 25 megawatts in the prior calendar 11 12 year, that enters into arrangements pursuant to subsection G, as certified by the Commission. 13 "Aggregate load" means the combined electrical load associated with selected accounts of an accelerated 14 renewable energy buyer with the same legal entity name as, or in the names of affiliated entities that control, 15 are controlled by, or are under common control of, such legal entity or are the names of affiliated entities 16 under a common parent. "Control" has the same meaning as provided in § 56-585.1:11. 17 "Falling water" means hydroelectric resources, including run-of-river generation from a combined 18 pumped-storage and run-of-river facility. "Falling water" does not include electricity generated from pumped-19 20 storage facilities. 21 "Low-income qualifying projects" means a project that provides a minimum of 50 percent of the 22 respective electric output to low-income utility customers as that term is defined in § 56-576. 23 "Phase I Utility" has the same meaning as provided in subdivision A 1 of § 56-585.1. 24 "Phase II Utility" has the same meaning as provided in subdivision A 1 of § 56-585.1. 25 "Previously developed project site" means any property, including related buffer areas, if any, that has been previously disturbed or developed for non-single-family residential, nonagricultural, or nonsilvicultural 26 use, regardless of whether such property currently is being used for any purpose. "Previously developed 27 28 project site" includes a brownfield as defined in § 10.1-1230 or any parcel that has been previously used (i) 29 for a retail, commercial, or industrial purpose; (ii) as a parking lot; (iii) as the site of a parking lot canopy or structure; (iv) for mining, which is any lands affected by coal mining that took place before August 3, 1977, 30 or any lands upon which extraction activities have been permitted by the Department of Energy under Title 31 32 45.2; (v) for quarrying; or (vi) as a landfill. 33 'Total electric energy" means total electric energy sold to retail customers in the Commonwealth service territory of a Phase I or Phase II Utility, other than accelerated renewable energy buyers, by the incumbent 34 35 electric utility or other retail supplier of electric energy in the previous calendar year, excluding an amount equivalent to the annual percentages of the electric energy that was supplied to such customer from nuclear 36 37 generating plants located within the Commonwealth in the previous calendar year, provided such nuclear 38 units were operating by July 1, 2020, or from any zero-carbon electric generating facilities not otherwise RPS 39 eligible sources and placed into service in the Commonwealth after July 1, 2030. 40 "Zero-carbon electricity" means electricity generated by any generating unit that does not emit carbon 41 dioxide as a by-product of combusting fuel to generate electricity. 42 B. 1. By December 31, 2024, except for any coal-fired electric generating units (i) jointly owned with a 43 cooperative utility or (ii) owned and operated by a Phase II Utility located in the coalfield region of the 44 Commonwealth that co-fires with biomass, any Phase I and Phase II Utility shall retire all generating units 45 principally fueled by oil with a rated capacity in excess of 500 megawatts and all coal-fired electric 46 generating units operating in the Commonwealth. 2. By December 31, 2045, except for biomass-fired electric generating units that do not co-fire with coal, 47 48 each Phase I and II Utility shall retire all other electric generating units located in the Commonwealth that 49 emit carbon as a by-product of combusting fuel to generate electricity. 3. A Phase I or Phase II Utility may petition the Commission for relief from the requirements of this 50 51 subsection on the basis that the requirement would threaten the reliability or security of electric service to 52 customers. The Commission shall consider in-state and regional transmission entity resources and shall 53 evaluate the reliability of each proposed retirement on a case-by-case basis in ruling upon any such petition. 54 C. Each Phase I and Phase II Utility shall participate in a renewable energy portfolio standard program 55 (RPS Program) that establishes annual goals for the sale of renewable energy to all retail customers in the 56 utility's service territory, other than accelerated renewable energy buyers pursuant to subsection G, regardless

HB1821ER

of whether such customers purchase electric supply service from the utility or from suppliers other than the utility. To comply with the RPS Program, each Phase I and Phase II Utility shall procure and retire Renewable Energy Certificates (RECs) originating from renewable energy standard eligible sources (RPS eligible sources). For purposes of complying with the RPS Program from 2021 to 2024, a Phase I and Phase II Utility may use RECs from any renewable energy facility, as defined in § 56-576, provided that such facilities are located in the Commonwealth or are physically located within the PJM Interconnection, LLC (PJM) region. However, at no time during this period or thereafter may any Phase I or Phase II Utility use RECs from (i) renewable thermal energy, (ii) renewable thermal energy equivalent, or (iii) biomass-fired facilities that are outside the Commonwealth. From compliance year 2025 and all years after, each Phase I

65

66 and Phase II Utility may only use RECs from RPS eligible sources for compliance with the RPS Program. 67 In order to qualify as RPS eligible sources, such sources must be (a) electric-generating resources that 68 generate electric energy derived from solar or wind located in the Commonwealth or off the Commonwealth's 69 Atlantic shoreline or in federal waters and interconnected directly into the Commonwealth or physically 70 located within the PJM region; (b) falling water resources located in the Commonwealth or physically located within the PJM region that were in operation as of January 1, 2020, that are owned by a Phase I or Phase II 71 Utility or for which a Phase I or Phase II Utility has entered into a contract prior to January 1, 2020, to 72 73 purchase the energy, capacity, and renewable attributes of such falling water resources; (c) non-utility-owned 74 resources from falling water that (1) are less than 65 megawatts, (2) began commercial operation after 75 December 31, 1979, or (3) added incremental generation representing greater than 50 percent of the original nameplate capacity after December 31, 1979, provided that such resources are located in the Commonwealth 76 77 or are physically located within the PJM region; (d) waste-to-energy or landfill gas-fired generating resources located in the Commonwealth and in operation as of January 1, 2020, provided that such resources do not use 78 79 waste heat from fossil fuel combustion; (e) geothermal heating and cooling systems located in the 80 Commonwealth; or (f) biomass-fired facilities in operation in the Commonwealth and in operation as of 81 January 1, 2023, that (1) supply no more than 10 percent of their annual net electrical generation to the 82 electric grid or no more than 15 percent of their annual total useful energy to any entity other than the 83 manufacturing facility to which the generating source is interconnected and are fueled by forest-product manufacturing residuals, including pulping liquor, bark, paper recycling residuals, biowastes, or biomass, as 84 85 described in subdivisions A 1, 2, and 4 of § 10.1-1308.1, provided that biomass as described in subdivision A 1 of § 10.1-1308.1 results from harvesting in accordance with best management practices for the sustainable 86 harvesting of biomass developed and enforced by the State Forester pursuant to § 10.1-1105, or (2) are owned 87 88 by a Phase I or Phase II Utility, have less than 52 megawatts capacity, and are fueled by forest-product 89 manufacturing residuals, biowastes, or biomass, as described in subdivisions A 1, 2, and 4 of § 10.1-1308.1, 90 provided that biomass as described in subdivision A 1 of § 10.1-1308.1 results from harvesting in accordance 91 with best management practices for the sustainable harvesting of biomass developed and enforced by the 92 State Forester pursuant to § 10.1-1105. Regardless of any future maintenance, expansion, or refurbishment activities, the total amount of RECs that may be sold by any RPS eligible source using biomass in any year 93 94 shall be no more than the number of megawatt hours of electricity produced by that facility in 2022; however, 95 in no year may any RPS eligible source using biomass sell RECs in excess of the actual megawatt-hours of 96 electricity generated by such facility that year. In order to comply with the RPS Program, each Phase I and 97 Phase II Utility may use and retire the environmental attributes associated with any existing owned or 98 contracted solar, wind, falling water, or biomass electric generating resources in operation, or proposed for 99 operation, in the Commonwealth or solar, wind, or falling water resources physically located within the PJM region, with such resource qualifying as a Commonwealth-located resource for purposes of this subsection, as 100 of January 1, 2020, provided that such renewable attributes are verified as RECs consistent with the PJM-EIS 101 Generation Attribute Tracking System. 102

103 1. The RPS Program requirements shall be a percentage of the total electric energy sold in the previous104 calendar year and shall be implemented in accordance with the following schedule:

105 Phase I Utilities Phase II Utilities

106	Year	RPS Program Requirement	Year	RPS Program Requirement
107	2021	6%	2021	14%
108	2022	7%	2022	17%
109	2023	8%	2023	20%

136	2049	96%		
137	2050 and	100%		
138	thereafter			

2. A Phase II Utility shall meet one percent of the RPS Program requirements in any given compliance
year with solar, wind, or anaerobic digestion resources of one megawatt or less located in the
Commonwealth, with not more than 3,000 kilowatts at any single location or at contiguous locations owned
by the same entity or affiliated entities and, to the extent that low-income qualifying projects are available,
then no less than 25 percent of such one percent shall be composed of low-income qualifying projects.

3. Beginning with the 2025 compliance year and thereafter, at least 75 percent of all RECs used by a
Phase II Utility in a compliance period shall come from RPS eligible resources located in the
Commonwealth.

4. Any Phase I or Phase II Utility may apply renewable energy sales achieved or RECs acquired in excess
of the sales requirement for that RPS Program to the sales requirements for RPS Program requirements in the
year in which it was generated and the five calendar years after the renewable energy was generated or the
RECs were created. To the extent that a Phase I or Phase II Utility procures RECs for RPS Program
compliance from resources the utility does not own, the utility shall be entitled to recover the costs of such
certificates at its election pursuant to § 56-249.6 or subdivision A 5 d of § 56-585.1.

5. Energy from a geothermal heating and cooling system is eligible for inclusion in meeting the
requirements of the RPS Program. RECs from a geothermal heating and cooling system are created based on
the amount of energy, converted from BTUs to kilowatt-hours, that is generated by a geothermal heating and
cooling system for space heating and cooling or water heating. The Commission shall determine the form and
manner in which such RECs are verified.

158 D. Each Phase I or Phase II Utility shall petition the Commission for necessary approvals to procure 159 zero-carbon electricity generating capacity as set forth in this subsection and energy storage resources as set 160 forth in subsection E. To the extent that a Phase I or Phase II Utility constructs or acquires new zero-carbon 161 generating facilities or energy storage resources, the utility shall petition the Commission for the recovery of the costs of such facilities, at the utility's election, either through its rates for generation and distribution 162 163 services or through a rate adjustment clause pursuant to subdivision A 6 of § 56-585.1. All costs not sought 164 for recovery through a rate adjustment clause pursuant to subdivision A 6 of § 56-585.1 associated with 165 generating facilities provided by sunlight or onshore or offshore wind are also eligible to be applied by the utility as a customer credit reinvestment offset as provided in subdivision A 8 of § 56-585.1. Costs associated 166 with the purchase of energy, capacity, or environmental attributes from facilities owned by the persons other 167 than the utility required by this subsection shall be recovered by the utility either through its rates for 168 169 generation and distribution services or pursuant to § 56-249.6.

Each Phase I Utility shall petition the Commission for necessary approvals to construct, acquire, or
 enter into agreements to purchase the energy, capacity, and environmental attributes of 600 megawatts of
 generating capacity using energy derived from sunlight or onshore wind.

a. By December 31, 2023, each Phase I Utility shall petition the Commission for necessary approvals to
construct, acquire, or enter into agreements to purchase the energy, capacity, and environmental attributes of
at least 200 megawatts of generating capacity located in the Commonwealth using energy derived from
sunlight or onshore wind, and 35 percent of such generating capacity procured shall be from the purchase of
energy, capacity, and environmental attributes from solar or onshore wind facilities owned by persons other
than the utility, with the remainder, in the aggregate, being from construction or acquisition by such Phase I
Utility.

b. By December 31, 2027, each Phase I Utility shall petition the Commission for necessary approvals to
 construct, acquire, or enter into agreements to purchase the energy, capacity, and environmental attributes of
 at least 200 megawatts of additional generating capacity located in the Commonwealth using energy derived

183 from sunlight or onshore wind, and 35 percent of such generating capacity procured shall be from the 184 purchase of energy, capacity, and environmental attributes from solar or onshore wind facilities owned by 185 persons other than the utility, with the remainder, in the aggregate, being from construction or acquisition by 186 such Phase I Utility.

c. By December 31, 2030, each Phase I Utility shall petition the Commission for necessary approvals to construct, acquire, or enter into agreements to purchase the energy, capacity, and environmental attributes of at least 200 megawatts of additional generating capacity located in the Commonwealth using energy derived from sunlight or onshore wind, and 35 percent of such generating capacity procured shall be from the purchase of energy, capacity, and environmental attributes from solar or onshore wind facilities owned by persons other than the utility, with the remainder, in the aggregate, being from construction or acquisition by such Phase I Utility.

d. Nothing in this subdivision 1 shall prohibit such Phase I Utility from constructing, acquiring, or
entering into agreements to purchase the energy, capacity, and environmental attributes of more than 600
megawatts of generating capacity located in the Commonwealth using energy derived from sunlight or
onshore wind, provided the utility receives approval from the Commission pursuant to §§ 56-580 and
56-585.1.

199 2. By December 31, 2035, each Phase II Utility shall petition the Commission for necessary approvals to 200 (i) construct, acquire, or enter into agreements to purchase the energy, capacity, and environmental attributes of 16,100 megawatts of generating capacity located in the Commonwealth using energy derived from 201 202 sunlight or onshore wind, which shall include 1,100 megawatts of solar generation of a nameplate capacity 203 not to exceed three megawatts per individual project and 35 percent of such generating capacity procured 204 shall be from the purchase of energy, capacity, and environmental attributes from solar facilities owned by 205 persons other than a utility, including utility affiliates and deregulated affiliates and (ii) pursuant to § 206 56-585.1:11, construct or purchase one or more offshore wind generation facilities located off the 207 Commonwealth's Atlantic shoreline or in federal waters and interconnected directly into the Commonwealth 208 with an aggregate capacity of up to 5,200 megawatts. At least 200 megawatts of the 16,100 megawatts shall 209 be placed on previously developed project sites.

a. By December 31, 2024, each Phase II Utility shall petition the Commission for necessary approvals to
construct, acquire, or enter into agreements to purchase the energy, capacity, and environmental attributes of
at least 3,000 megawatts of generating capacity located in the Commonwealth using energy derived from
sunlight or onshore wind, and 35 percent of such generating capacity procured shall be from the purchase of
energy, capacity, and environmental attributes from solar or onshore wind facilities owned by persons other
than the utility, with the remainder, in the aggregate, being from construction or acquisition by such Phase II
Utility.

b. By December 31, 2027, each Phase II Utility shall petition the Commission for necessary approvals to
construct, acquire, or enter into agreements to purchase the energy, capacity, and environmental attributes of
at least 3,000 megawatts of additional generating capacity located in the Commonwealth using energy
derived from sunlight or onshore wind, and 35 percent of such generating capacity procured shall be from the
purchase of energy, capacity, and environmental attributes from solar or onshore wind facilities owned by
persons other than the utility, with the remainder, in the aggregate, being from construction or acquisition by
such Phase II Utility.

c. By December 31, 2030, each Phase II Utility shall petition the Commission for necessary approvals to
 construct, acquire, or enter into agreements to purchase the energy, capacity, and environmental attributes of
 at least 4,000 megawatts of additional generating capacity located in the Commonwealth using energy
 derived from sunlight or onshore wind, and 35 percent of such generating capacity procured shall be from the
 purchase of energy, capacity, and environmental attributes from solar or onshore wind facilities owned by
 persons other than the utility, with the remainder, in the aggregate, being from construction or acquisition by
 such Phase II Utility.

d. By December 31, 2035, each Phase II Utility shall petition the Commission for necessary approvals to
 construct, acquire, or enter into agreements to purchase the energy, capacity, and environmental attributes of
 at least 6,100 megawatts of additional generating capacity located in the Commonwealth using energy
 derived from sunlight or onshore wind, and 35 percent of such generating capacity procured shall be from the
 purchase of energy, capacity, and environmental attributes from solar or onshore wind facilities owned by
 persons other than the utility, with the remainder, in the aggregate, being from construction or acquisition by
 such Phase II Utility.

e. Nothing in this subdivision 2 shall prohibit such Phase II Utility from constructing, acquiring, or
entering into agreements to purchase the energy, capacity, and environmental attributes of more than 16,100
megawatts of generating capacity located in the Commonwealth using energy derived from sunlight or
onshore wind, provided the utility receives approval from the Commission pursuant to §§ 56-580 and
56-585.1.

3. Nothing in this section shall prohibit a utility from petitioning the Commission to construct or acquire
 zero-carbon electricity or from entering into contracts to procure the energy, capacity, and environmental

attributes of zero-carbon electricity generating resources in excess of the requirements in subsection B. The
Commission shall determine whether to approve such petitions on a stand-alone basis pursuant to §§ 56-580
and 56-585.1, provided that the Commission's review shall also consider whether the proposed generating
capacity (i) is necessary to meet the utility's native load, (ii) is likely to lower customer fuel costs, (iii) will
provide economic development opportunities in the Commonwealth, and (iv) serves a need that cannot be

250 more affordably met with demand-side or energy storage resources.

251 Each Phase I and Phase II Utility shall, at least once every year, conduct a request for proposals for new 252 solar and wind resources. Such requests shall quantify and describe the utility's need for energy, capacity, or 253 renewable energy certificates. The requests for proposals shall be publicly announced and made available for 254 public review on the utility's website at least 45 days prior to the closing of such request for proposals. The 255 requests for proposals shall provide, at a minimum, the following information: (a) the size, type, and timing 256 of resources for which the utility anticipates contracting; (b) any minimum thresholds that must be met by 257 respondents; (c) major assumptions to be used by the utility in the bid evaluation process, including 258 environmental emission standards; (d) detailed instructions for preparing bids so that bids can be evaluated on 259 a consistent basis; (e) the preferred general location of additional capacity; and (f) specific information 260 concerning the factors involved in determining the price and non-price criteria used for selecting winning 261 bids. A utility may evaluate responses to requests for proposals based on any criteria that it deems reasonable but shall at a minimum consider the following in its selection process: (1) the status of a particular project's 262 263 development; (2) the age of existing generation facilities; (3) the demonstrated financial viability of a project and the developer; (4) a developer's prior experience in the field; (5) the location and effect on the 264 265 transmission grid of a generation facility; (6) benefits to the Commonwealth that are associated with 266 particular projects, including regional economic development and the use of goods and services from Virginia 267 businesses; and (7) the environmental impacts of particular resources, including impacts on air quality within 268 the Commonwealth and the carbon intensity of the utility's generation portfolio.

269 4. In connection with the requirements of this subsection, each Phase I and Phase II Utility shall, 270 commencing in 2020 and concluding in 2035, submit annually a plan and petition for approval for the 271 development of new solar and onshore wind generation capacity. Such plan shall reflect, in the aggregate and 272 over its duration, the requirements of subsection D concerning the allocation percentages for construction or 273 purchase of such capacity. Such petition shall contain any request for approval to construct such facilities 274 pursuant to subsection D of § 56-580 and a request for approval or update of a rate adjustment clause 275 pursuant to subdivision A 6 of § 56-585.1 to recover the costs of such facilities. Such plan shall also include 276 the utility's plan to meet the energy storage project targets of subsection E, including the goal of installing at 277 least 10 percent of such energy storage projects behind the meter. In determining whether to approve the 278 utility's plan and any associated petition requests, the Commission shall determine whether they are 279 reasonable and prudent and shall give due consideration to (i) the RPS and carbon dioxide reduction 280 requirements in this section; (ii) the promotion of new renewable generation and energy storage resources 281 within the Commonwealth, and associated economic development; and (iii) fuel savings projected to be 282 achieved by the plan. Notwithstanding any other provision of this title, the Commission's final order 283 regarding any such petition and associated requests shall be entered by the Commission not more than six 284 months after the date of the filing of such petition.

285 5. If, in any year, a Phase I or Phase II Utility is unable to meet the compliance obligation of the RPS 286 Program requirements or if the cost of RECs necessary to comply with RPS Program requirements exceeds \$45 per megawatt hour, such supplier shall be obligated to make a deficiency payment equal to \$45 for each 287 288 megawatt-hour shortfall for the year of noncompliance, except that the deficiency payment for any shortfall 289 in procuring RECs for solar, wind, or anaerobic digesters located in the Commonwealth shall be \$75 per 290 megawatts hour for resources one megawatt and lower. The amount of any deficiency payment shall increase 291 by one percent annually after 2021. A Phase I or Phase II Utility shall be entitled to recover the costs of such 292 payments as a cost of compliance with the requirements of this subsection pursuant to subdivision A 5 d of § 293 56-585.1. All proceeds from the deficiency payments shall be deposited into an interest-bearing account 294 administered by the Department of Energy. In administering this account, the Department of Energy shall 295 manage the account as follows: (i) 50 percent of total revenue shall be directed to job training programs in 296 historically economically disadvantaged communities; (ii) 16 percent of total revenue shall be directed to 297 energy efficiency measures for public facilities; (iii) 30 percent of total revenue shall be directed to renewable 298 energy programs located in historically economically disadvantaged communities; and (iv) four percent of 299 total revenue shall be directed to administrative costs.

For any project constructed pursuant to this subsection or subsection E, a utility shall, subject to a
 competitive procurement process, procure equipment from a Virginia-based or United States-based
 manufacturer using materials or product components made in Virginia or the United States, if reasonably
 available and competitively priced.

E. To enhance reliability and performance of the utility's generation and distribution system, each Phase I
 and Phase II Utility shall petition the Commission for necessary approvals to construct or acquire new,
 utility-owned energy storage resources.

307 1. By December 31, 2035, each Phase I Utility shall petition the Commission for necessary approvals to
 308 construct or acquire 400 megawatts of energy storage capacity. Nothing in this subdivision shall prohibit a
 309 Phase I Utility from constructing or acquiring more than 400 megawatts of energy storage, provided that the
 310 utility receives approval from the Commission pursuant to §§ 56-580 and 56-585.1.

2. By December 31, 2035, each Phase II Utility shall petition the Commission for necessary approvals to construct or acquire 2,700 megawatts of energy storage capacity. Nothing in this subdivision shall prohibit a Phase II Utility from constructing or acquiring more than 2,700 megawatts of energy storage, provided that the utility receives approval from the Commission pursuant to §§ 56-580 and 56-585.1.

315 3. No single energy storage project shall exceed 500 megawatts in size, except that a Phase II Utility may
 316 procure a single energy storage project up to 800 megawatts.

4. All energy storage projects procured pursuant to this subsection shall meet the competitive procurementprotocols established in subdivision D 3.

319 5. After July 1, 2020, at least 35 percent of the energy storage facilities placed into service shall be (i) 320 purchased by the public utility from a party other than the public utility or (ii) owned by a party other than a 321 public utility, with the capacity from such facilities sold to the public utility. By January 1, 2021, the 322 Commission shall adopt regulations to achieve the deployment of energy storage for the Commonwealth 323 required in subdivisions 1 and 2, including regulations that set interim targets and update existing utility 324 planning and procurement rules. The regulations shall include programs and mechanisms to deploy energy storage, including competitive solicitations, behind-the-meter incentives, non-wires alternatives programs, 325 326 and peak demand reduction programs.

F. All costs incurred by a Phase I or Phase II Utility related to compliance with the requirements of this 327 328 section or pursuant to § 56-585.1:11, including (i) costs of generation facilities powered by sunlight or 329 onshore or offshore wind, or energy storage facilities, that are constructed or acquired by a Phase I or Phase II 330 Utility after July 1, 2020, (ii) costs of capacity, energy, or environmental attributes from generation facilities 331 powered by sunlight or onshore or offshore wind, or falling water, or energy storage facilities purchased by 332 the utility from persons other than the utility through agreements after July 1, 2020, and (iii) all other costs of 333 compliance, including costs associated with the purchase of RECs associated with RPS Program 334 requirements pursuant to this section shall be recovered from all retail customers in the service territory of a 335 Phase I or Phase II Utility as a non-bypassable charge, irrespective of the generation supplier of such customer, except (a) as provided in subsection G for an accelerated renewable energy buyer or (b) as 336 337 provided in subdivision C 3 of § 56-585.1:11, with respect to the costs of an offshore wind generation 338 facility, for a PIPP eligible utility customer or an advanced clean energy buyer or qualifying large general 339 service customer, as those terms are defined in § 56-585.1:11. If a Phase I or Phase II Utility serves 340 customers in more than one jurisdiction, such utility shall recover all of the costs of compliance with the RPS 341 Program requirements from its Virginia customers through the applicable cost recovery mechanism, and all 342 associated energy, capacity, and environmental attributes shall be assigned to Virginia to the extent that such 343 costs are requested but not recovered from any system customers outside the Commonwealth.

By September 1, 2020, the Commission shall direct the initiation of a proceeding for each Phase I and Phase II Utility to review and determine the amount of such costs, net of benefits, that should be allocated to retail customers within the utility's service territory which have elected to receive electric supply service from a supplier of electric energy other than the utility, and shall direct that tariff provisions be implemented to recover those costs from such customers beginning no later than January 1, 2021. Thereafter, such charges and tariff provisions shall be updated and trued up by the utility on an annual basis, subject to continuing review and approval by the Commission.

351 G. 1. An accelerated renewable energy buyer may contract with a Phase I or Phase II Utility, or a person 352 other than a Phase I or Phase II Utility, to obtain (i) RECs from RPS eligible resources or (ii) bundled 353 capacity, energy, and RECs from solar or wind generation resources located within the PJM region and 354 initially placed in commercial operation after January 1, 2015, including any contract with a utility for such 355 generation resources that does not allocate the cost of such resources to or recover the cost of such resources 356 from any other customer customers of the utility the cost of such resources that have not voluntarily agreed 357 to pay such cost. Such an accelerated renewable energy buyer may offset all or a portion of its electric load for purposes of RPS compliance through such arrangements. An accelerated renewable energy buyer shall be 358 359 exempt from the assignment of non-bypassable RPS compliance costs pursuant to subsection F, with the exception of the costs of an offshore wind generating facility pursuant to § 56-585.1:11, based on the amount 360 361 of RECs obtained pursuant to this subsection in proportion to the customer's total electric energy 362 consumption, on an annual basis. An accelerated renewable energy buyer may also contract with a Phase I or 363 Phase II Utility, or a person other than a Phase I or Phase II Utility, to obtain capacity from energy storage 364 facilities located within the network service area of the Phase II Utility pursuant to this subsection, provided 365 that the costs of such resources are not recovered from any of the utility's customers who have not voluntarily 366 agreed to pay for such costs. Such accelerated renewable energy buyer shall be exempt from the assignment 367 of non-bypassable RPS Program compliance costs specifically associated with energy storage facilities pursuant to this subsection in proportion to the customer's total capacity demand on an annual basis. An 368

369 accelerated renewable energy buyer obtaining RECs only shall not be exempt from costs related to 370 procurement of new solar or onshore wind generation capacity, energy, or environmental attributes, or energy 371 storage facilities, by the utility pursuant to subsections D and E, however, an accelerated renewable energy 372 buyer that is a customer of a Phase II Utility and was subscribed, as of March 1, 2020, to a voluntary 373 companion experimental tariff offering of the utility for the purchase of renewable attributes from renewable 374 energy facilities that requires a renewable facilities agreement and the purchase of a minimum of 2,000 375 renewable attributes annually, shall be exempt from allocation of the net costs related to procurement of new 376 solar or onshore wind generation capacity, energy, or environmental attributes, or energy storage facilities, by 377 the utility pursuant to subsections D and E, based on the amount of RECs associated with the customer's 378 renewable facilities agreements associated with such tariff offering as of that date in proportion to the 379 customer's total electric energy consumption, on an annual basis. To the extent that an accelerated renewable 380 energy buyer contracts for the capacity of new solar or wind generation resources or energy storage facilities pursuant to this subsection, the aggregate amount of such nameplate capacity shall be offset from the utility's 381 382 procurement requirements pursuant to subsection D. All RECs associated with contracts entered into by an 383 accelerated renewable energy buyer with the utility, or a person other than the utility, for an RPS Program 384 shall not be credited to the utility's compliance with its RPS requirements, and the calculation of the utility's 385 RPS Program requirements shall not include the electric load covered by customers certified as accelerated 386 renewable energy buyers.

2. Each Phase I or Phase II Utility shall certify, and verify as necessary, to the Commission that the accelerated renewable energy buyer has satisfied the exemption requirements of this subsection for each year, or an accelerated renewable energy buyer may choose to certify satisfaction of this exemption by reporting to the Commission individually. The Commission may promulgate such rules and regulations as may be necessary to implement the provisions of this subsection.

392 3. Provided that no incremental costs associated with any contract between a Phase I or Phase II Utility
and an accelerated renewable energy buyer is allocated to or recovered from any other customer of the utility,
any such contract with an accelerated renewable energy buyer that is a jurisdictional customer of the utility
shall not be deemed a special rate or contract requiring Commission approval pursuant to § 56-235.2.

396 H. No customer of a Phase II Utility with a peak demand in excess of 100 megawatts in 2019 that elected 397 pursuant to subdivision A 3 of § 56-577 to purchase electric energy from a competitive service provider prior 398 to April 1, 2019, shall be allocated any non-bypassable charges pursuant to subsection F for such period that 399 the customer is not purchasing electric energy from the utility, and such customer's electric load shall not be included in the utility's RPS Program requirements. No customer of a Phase I Utility that elected pursuant to 400 subdivision A 3 of § 56-577 to purchase electric energy from a competitive service provider prior to February 401 402 1, 2019, shall be allocated any non-bypassable charges pursuant to subsection F for such period that the 403 customer is not purchasing electric energy from the utility, and such customer's electric load shall not be 404 included in the utility's RPS Program requirements.

I. In any petition by a Phase I or Phase II Utility for a certificate of public convenience and necessity to construct and operate an electrical generating facility that generates electric energy derived from sunlight submitted pursuant to § 56-580, such utility shall demonstrate that the proposed facility was subject to competitive procurement or solicitation as set forth in subdivision D 3.

J. Notwithstanding any contrary provision of law, for the purposes of this section, any falling water
generation facility located in the Commonwealth and commencing commercial operations prior to July 1,
2024, shall be considered a renewable energy portfolio standard (RPS) eligible source.

K. Nothing in this section shall apply to any entity organized under Chapter 9.1 (§ 56-231.15 et seq.).

L. The Commission shall adopt such rules and regulations as may be necessary to implement the
 provisions of this section, including a requirement that participants verify whether the RPS Program
 requirements are met in accordance with this section.

416 2. That the State Corporation Commission shall promulgate any rules or regulations necessary to 417 ensure that accelerated renewable energy buyers receive fair credit for any energy storage resources 418 procured pursuant to subsection G of § 56-585.5 of the Code of Virginia, as amended by this act, which 419 credit shall be based on capacity provided rather than energy consumed and shall consider the 420 effective load-carrying capacity provided by such resources.

421 3. That the State Corporation Commission shall ensure that any distribution and transmission costs 422 associated with new energy generation resources procured pursuant to subsection G of § 56-585.5 of

423 the Code of Virginia, as amended by this act, are justly and reasonably allocated.

412
