

26102381D

1 SENATE BILL NO. 598

2 Offered January 14, 2026

3 Prefiled January 14, 2026

4 A BILL to amend and reenact § 56-585.5 of the Code of Virginia, relating to electric utilities; renewable
5 energy portfolio standard; zero-carbon electricity; zero emission credits; power purchase agreements.
6

7 Patron—Deeds

8 Referred to Committee on Commerce and Labor
9

10 Be it enacted by the General Assembly of Virginia:

11 1. That § 56-585.5 of the Code of Virginia is amended and reenacted as follows:

12 § 56-585.5. Generation of electricity from renewable and zero carbon sources.

13 A. As used in this section:

14 "Accelerated renewable energy buyer" means a commercial or industrial customer of a Phase I or Phase II
15 Utility, irrespective of generation supplier, with an aggregate load over 25 megawatts in the prior calendar
16 year, that enters into arrangements pursuant to subsection G H, as certified by the Commission.17 "Aggregate load" means the combined electrical load associated with selected accounts of an accelerated
18 renewable energy buyer with the same legal entity name as, or in the names of affiliated entities that control,
19 are controlled by, or are under common control of, such legal entity or are the names of affiliated entities
20 under a common parent.

21 "Control" has the same meaning as provided in § 56-585.1:11.

22 "Elementary or secondary" has the same meaning as provided in § 22.1-1.

23 "Falling water" means hydroelectric resources, including run-of-river generation from a combined
24 pumped-storage and run-of-river facility. "Falling water" does not include electricity generated from pumped-
25 storage facilities.26 "Low-income qualifying projects" means a project that provides a minimum of 50 percent of the
27 respective electric output to low-income utility customers as that term is defined in § 56-576.

28 "Phase I Utility" has the same meaning as provided in subdivision A 1 of § 56-585.1.

29 "Phase II Utility" has the same meaning as provided in subdivision A 1 of § 56-585.1.

30 "Previously developed project site" means any property, including related buffer areas, if any, that has
31 been previously disturbed or developed for non-single-family residential, nonagricultural, or nonsilvicultural
32 use, regardless of whether such property currently is being used for any purpose. "Previously developed
33 project site" includes a brownfield as defined in § 10.1-1230 or any parcel that has been previously used (i)
34 for a retail, commercial, or industrial purpose; (ii) as a parking lot; (iii) as the site of a parking lot canopy or
35 structure; (iv) for mining, which is any lands affected by coal mining that took place before August 3, 1977,
36 or any lands upon which extraction activities have been permitted by the Department of Energy under Title
37 45.2; (v) for quarrying; or (vi) as a landfill.38 "Total electric energy" means total electric energy sold to retail customers in the Commonwealth service
39 territory of a Phase I or Phase II Utility, other than accelerated renewable energy buyers, by the incumbent
40 electric utility or other retail supplier of electric energy in the previous calendar year, excluding an amount
41 equivalent to the annual percentages of the electric energy that was supplied to such customer from nuclear
42 generating plants located within the Commonwealth in the previous calendar year, provided such nuclear
43 units were operating by July 1, 2020, or from any zero-carbon electric generating facilities not otherwise RPS
44 eligible sources and placed into service in the Commonwealth after July 1, 2030.45 "Zero-carbon electricity" means electricity generated by any generating unit that does not emit carbon
46 dioxide as a by-product of *synthesizing or* combusting fuel to generate electricity. *Zero-carbon electricity*
47 *does not include fossil fuel generation equipped with carbon capture technology or energy storage resources.*48 B. 1. By December 31, 2024, except for any coal-fired electric generating units (i) jointly owned with a
49 cooperative utility or (ii) owned and operated by a Phase II Utility located in the coalfield region of the
50 Commonwealth that co-fires with biomass, any Phase I and Phase II Utility shall retire all generating units
51 principally fueled by oil with a rated capacity in excess of 500 megawatts and all coal-fired electric
52 generating units operating in the Commonwealth.53 2. By December 31, 2045, except for biomass-fired electric generating units that do not co-fire with coal,
54 each Phase I and II Utility shall retire all other electric generating units located in the Commonwealth that
55 emit carbon as a by-product of combusting fuel to generate electricity.56 3. A Phase I or Phase II Utility may petition the Commission for relief from the requirements of this
57 subsection on the basis that the requirement would threaten the reliability or security of electric service to
58 customers. The Commission shall consider in-state and regional transmission entity resources and shall

INTRODUCED

SBS98

59 evaluate the reliability of each proposed retirement on a case-by-case basis in ruling upon any such petition.

60 C. Each Phase I and Phase II Utility shall participate in a renewable energy portfolio standard program
 61 (RPS Program) that establishes annual goals for the sale of renewable energy to all retail customers in the
 62 utility's service territory, other than accelerated renewable energy buyers pursuant to subsection *G H*,
 63 regardless of whether such customers purchase electric supply service from the utility or from suppliers other
 64 than the utility. To comply with the RPS Program, each Phase I and Phase II Utility shall procure and retire
 65 Renewable Energy Certificates (RECs) or Zero Emission Credits (ZECs) originating from renewable energy
 66 standard eligible sources (RPS eligible sources). For purposes of complying with the RPS Program from
 67 2021 to 2024, a Phase I and Phase II Utility may use RECs from any renewable energy facility, as defined in
 68 § 56-576, provided that such facilities are located in the Commonwealth or are physically located within the
 69 PJM Interconnection, LLC (PJM) region. However, at no time during this period or thereafter may any Phase
 70 I or Phase II Utility use RECs from (i) renewable thermal energy, (ii) renewable thermal energy equivalent,
 71 or (iii) biomass-fired facilities that are outside the Commonwealth. From compliance year 2025 and all years
 72 ~~after through compliance year 2034~~, each Phase I and Phase II Utility may only use RECs from RPS eligible
 73 sources for compliance with the RPS Program. *From compliance year 2035 and all years after, each Phase I*
 74 *and Phase II Utility may only use RECs or ZECs from RPS eligible sources for compliance with the RPS*
 75 *program.*

76 In order to qualify as RPS eligible sources, such sources must be (a) electric-generating resources that
 77 generate electric energy derived from solar or wind located in the Commonwealth or off the Commonwealth's
 78 Atlantic shoreline or in federal waters and interconnected directly into the Commonwealth or physically
 79 located within the PJM region; (b) falling water resources located in the Commonwealth or physically located
 80 within the PJM region that were in operation as of January 1, 2020, that are owned by a Phase I or Phase II
 81 Utility or for which a Phase I or Phase II Utility has entered into a contract prior to January 1, 2020, to
 82 purchase the energy, capacity, and renewable attributes of such falling water resources; (c) non-utility-owned
 83 resources from falling water that (1) are less than 65 megawatts, (2) began commercial operation after
 84 December 31, 1979, or (3) added incremental generation representing greater than 50 percent of the original
 85 nameplate capacity after December 31, 1979, provided that such resources are located in the Commonwealth
 86 or are physically located within the PJM region; (d) waste-to-energy or landfill gas-fired generating resources
 87 located in the Commonwealth and in operation as of January 1, 2020, provided that such resources do not use
 88 waste heat from fossil fuel combustion; (e) geothermal heating and cooling systems located in the
 89 Commonwealth; (f) geothermal electric generating resources located in the Commonwealth or physically
 90 located within the PJM region; or (g) biomass-fired facilities in operation in the Commonwealth and in
 91 operation as of January 1, 2023, that (1) supply no more than 10 percent of their annual net electrical
 92 generation to the electric grid or no more than 15 percent of their annual total useful energy to any entity
 93 other than the manufacturing facility to which the generating source is interconnected and are fueled by
 94 forest-product manufacturing residuals, including pulping liquor, bark, paper recycling residuals, biowastes,
 95 or biomass, as described in subdivisions A 1, 2, and 4 of § 10.1-1308.1, provided that biomass as described in
 96 subdivision A 1 of § 10.1-1308.1 results from harvesting in accordance with best management practices for
 97 the sustainable harvesting of biomass developed and enforced by the State Forester pursuant to § 10.1-1105,
 98 or (2) are owned by a Phase I or Phase II Utility, have less than 52 megawatts capacity, and are fueled by
 99 forest-product manufacturing residuals, biowastes, or biomass, as described in subdivisions A 1, 2, and 4 of
 100 § 10.1-1308.1, provided that biomass as described in subdivision A 1 of § 10.1-1308.1 results from
 101 harvesting in accordance with best management practices for the sustainable harvesting of biomass developed
 102 and enforced by the State Forester pursuant to § 10.1-1105. Regardless of any future maintenance, expansion,
 103 or refurbishment activities, the total amount of RECs that may be sold by any RPS eligible source using
 104 biomass in any year shall be no more than the number of megawatt hours of electricity produced by that
 105 facility in 2022; however, in no year may any RPS eligible source using biomass sell RECs in excess of the
 106 actual megawatt-hours of electricity generated by such facility that year. In order to comply with the RPS
 107 Program, each Phase I and Phase II Utility may use and retire the environmental attributes associated with
 108 any existing owned or contracted solar, wind, falling water, or biomass electric generating resources in
 109 operation, or proposed for operation, in the Commonwealth or solar, wind, or falling water resources
 110 physically located within the PJM region, with such resource qualifying as a Commonwealth-located
 111 resource for purposes of this subsection, as of January 1, 2020, provided that such renewable attributes are
 112 verified as RECs consistent with the PJM-EIS Generation Attribute Tracking System. *Beginning in 2035,*
 113 *zero-carbon electricity generation resources physically located within the PJM region shall be RPS eligible*
 114 *sources, provided that the carbon-free attributes associated with such resources are verified as ZECs*
 115 *consistent with the PJM-EIS Generation Attribute Tracking System.*

116 1. The RPS Program requirements shall be a percentage of the total electric energy sold in the previous
 117 calendar year and shall be implemented in accordance with the following schedule:

Phase I Utilities	Phase II Utilities		
Year	Year	Year	Year
2021	6%	2021	14%

121	2022	7%	2022	17%
122	2023	8%	2023	20%
123	2024	10%	2024	23%
124	2025	14%	2025	26%
125	2026	17%	2026	29%
126	2027	20%	2027	32%
127	2028	24%	2028	35%
128	2029	27%	2029	38%
129	2030	30%	2030	41%
130	2031	33%	2031	45%
131	2032	36%	2032	49%
132	2033	39%	2033	52%
133	2034	42%	2034	55%
134	2035	45%	2035	59%
135	2036	53%	2036	63%
136	2037	53%	2037	67%
137	2038	57%	2038	71%
138	2039	61%	2039	75%
139	2040	65%	2040	79%
140	2041	68%	2041	83%
141	2042	71%	2042	87%
142	2043	74%	2043	91%
143	2044	77%	2044	95%
144	2045	80%	2045 and thereafter	100%
145				
146	2046	84%		
147	2047	88%		
148	2048	92%		
149	2049	96%		
150	2050 and thereafter	100%		
151				

2. A Phase II Utility shall meet one percent of the RPS Program requirements in any given compliance year with solar, wind, or anaerobic digestion resources of one megawatt or less located in the Commonwealth, with not more than 3,000 kilowatts at any single location or at contiguous locations owned by the same entity or affiliated entities and, to the extent that low-income qualifying projects are available, then no less than 25 percent of such one percent shall be composed of low-income qualifying projects. To the extent that low-income qualifying projects are not available and projects located on or adjacent to public elementary or secondary schools are available, the remainder of no less than 25 percent of such one percent shall be composed of projects located on or adjacent to public elementary or secondary schools. A project located on or adjacent to a public elementary or secondary school shall have a contractual relationship with such school in order to qualify for the provisions of this section.

3. Beginning with the 2025 compliance year and thereafter, at least 75 percent of all RECs used by a Phase II Utility in a compliance period shall come from RPS eligible resources located in the Commonwealth *its service territory within the PJM region. Beginning with the 2035 compliance year and thereafter, at least 75 percent of all ZECs used by a Phase I or Phase II Utility in a compliance period shall come from RPS eligible resources located within the Phase II Utility's service territory within the PJM region.*

4. Any Phase I or Phase II Utility may apply renewable energy sales achieved, ZECs, or RECs acquired in excess of the sales requirement for that RPS Program to the sales requirements for RPS Program requirements in the year in which it was generated and the five calendar years after the renewable energy was generated or the ZECs or RECs were created. To the extent that a Phase I or Phase II Utility procures ZECs or RECs for RPS Program compliance from resources the utility does not own, the utility shall be entitled to recover the costs of such certificates at its election pursuant to § 56-249.6 or subdivision A 5 d of § 56-585.1.

5. Energy from a geothermal heating and cooling system is eligible for inclusion in meeting the requirements of the RPS Program. RECs from a geothermal heating and cooling system are created based on the amount of energy, converted from BTUs to kilowatt-hours, that is generated by a geothermal heating and cooling system for space heating and cooling or water heating. The Commission shall determine the form and manner in which such RECs are verified.

D. Each Phase I or Phase II Utility shall petition the Commission for necessary approvals to procure zero-carbon electricity generating capacity as set forth in this subsection and energy storage resources as set forth in subsection E. To the extent that a Phase I or Phase II Utility constructs or acquires new zero-carbon generating facilities or energy storage resources, the utility shall petition the Commission for the recovery of the costs of such facilities, at the utility's election, either through its rates for generation and distribution services or through a rate adjustment clause pursuant to subdivision A 6 of § 56-585.1. All costs not sought

184 for recovery through a rate adjustment clause pursuant to subdivision A 6 of § 56-585.1 associated with
185 generating facilities provided by sunlight or onshore or offshore wind are also eligible to be applied by the
186 utility as a customer credit reinvestment offset as provided in subdivision A 8 of § 56-585.1. Costs associated
187 with the purchase of energy, capacity, or environmental attributes from facilities owned by the persons other
188 than the utility required by this subsection shall be recovered by the utility either through its rates for
189 generation and distribution services or pursuant to § 56-249.6.

190 1. Each Phase I Utility shall petition the Commission for necessary approvals to construct, acquire, or
191 enter into agreements to purchase the energy, capacity, and environmental attributes of 600 megawatts of
192 generating capacity using energy derived from sunlight or onshore wind.

193 a. By December 31, 2023, each Phase I Utility shall petition the Commission for necessary approvals to
194 construct, acquire, or enter into agreements to purchase the energy, capacity, and environmental attributes of
195 at least 200 megawatts of generating capacity located in the Commonwealth using energy derived from
196 sunlight or onshore wind, and 35 percent of such generating capacity procured shall be from the purchase of
197 energy, capacity, and environmental attributes from solar or onshore wind facilities owned by persons other
198 than the utility, with the remainder, in the aggregate, being from construction or acquisition by such Phase I
199 Utility.

200 b. By December 31, 2027, each Phase I Utility shall petition the Commission for necessary approvals to
201 construct, acquire, or enter into agreements to purchase the energy, capacity, and environmental attributes of
202 at least 200 megawatts of additional generating capacity located in the Commonwealth using energy derived
203 from sunlight or onshore wind, and 35 *at least* 50 percent of such generating capacity procured shall be from
204 the purchase of energy, capacity, and environmental attributes from solar or onshore wind facilities owned by
205 persons other than the utility, with the remainder, in the aggregate, being from construction or acquisition by
206 such Phase I Utility.

207 c. By December 31, 2030, each Phase I Utility shall petition the Commission for necessary approvals to
208 construct, acquire, or enter into agreements to purchase the energy, capacity, and environmental attributes of
209 at least 200 megawatts of additional generating capacity located in the Commonwealth using energy derived
210 from sunlight or onshore wind, and 35 *at least* 50 percent of such generating capacity procured shall be from
211 the purchase of energy, capacity, and environmental attributes from solar or onshore wind facilities owned by
212 persons other than the utility, with the remainder, in the aggregate, being from construction or acquisition by
213 such Phase I Utility.

214 d. Nothing in this subdivision 1 shall prohibit such Phase I Utility from constructing, acquiring, or
215 entering into agreements to purchase the energy, capacity, and environmental attributes of more than 600
216 megawatts of generating capacity located in the Commonwealth using energy derived from sunlight or
217 onshore wind, provided the utility receives approval from the Commission pursuant to §§ 56-580 and
218 56-585.1.

219 2. By December 31, 2035, each Phase II Utility shall petition the Commission for necessary approvals to
220 (i) construct, acquire, or enter into agreements to purchase the energy, capacity, and environmental attributes
221 of 16,100 megawatts of generating capacity located in the Commonwealth using energy derived from
222 sunlight or onshore wind, which shall include 1,100 megawatts of solar generation of a nameplate capacity
223 not to exceed three megawatts per individual project and 35 *at least* 50 percent of such generating capacity
224 procured shall be from the purchase of energy, capacity, and environmental attributes from solar facilities
225 owned by persons other than a utility, including utility affiliates and deregulated affiliates and (ii) pursuant to
226 § 56-585.1:11, construct or purchase one or more offshore wind generation facilities located off the
227 Commonwealth's Atlantic shoreline or in federal waters and interconnected directly into the Commonwealth
228 with an aggregate capacity of up to 5,200 megawatts. At least 200 megawatts of the 16,100 megawatts shall
229 be placed on previously developed project sites.

230 a. By December 31, 2024, each Phase II Utility shall petition the Commission for necessary approvals to
231 construct, acquire, or enter into agreements to purchase the energy, capacity, and environmental attributes of
232 at least 3,000 megawatts of generating capacity located in the Commonwealth using energy derived from
233 sunlight or onshore wind, and 35 percent of such generating capacity procured shall be from the purchase of
234 energy, capacity, and environmental attributes from solar or onshore wind facilities owned by persons other
235 than the utility, with the remainder, in the aggregate, being from construction or acquisition by such Phase II
236 Utility.

237 b. By December 31, 2027, each Phase II Utility shall petition the Commission for necessary approvals to
238 construct, acquire, or enter into agreements to purchase the energy, capacity, and environmental attributes of
239 at least 3,000 6,000 megawatts of additional generating capacity located in the Commonwealth using energy
240 derived from sunlight or onshore wind, and 35 *at least* 50 percent of such generating capacity procured shall
241 be from the purchase of energy, capacity, and environmental attributes from solar or onshore wind facilities
242 owned by persons other than the utility, with the remainder, in the aggregate, being from construction or
243 acquisition by such Phase II Utility.

244 c. By December 31, 2030, each Phase II Utility shall petition the Commission for necessary approvals to
245 construct, acquire, or enter into agreements to purchase the energy, capacity, and environmental attributes of

246 at least 4,000 megawatts of additional generating capacity located in the Commonwealth using energy
 247 derived from sunlight or onshore wind, and ~~35~~ at least 50 percent of such generating capacity procured shall
 248 be from the purchase of energy, capacity, and environmental attributes from solar or onshore wind facilities
 249 owned by persons other than the utility, with the remainder, in the aggregate, being from construction or
 250 acquisition by such Phase II Utility.

251 d. By December 31, 2035, each Phase II Utility shall petition the Commission for necessary approvals to
 252 construct, acquire, or enter into agreements to purchase the energy, capacity, and environmental attributes of
 253 at least ~~6,100~~ 3,100 megawatts of additional generating capacity located in the Commonwealth using energy
 254 derived from sunlight or onshore wind, and ~~35~~ at least 50 percent of such generating capacity procured shall
 255 be from the purchase of energy, capacity, and environmental attributes from solar or onshore wind facilities
 256 owned by persons other than the utility, with the remainder, in the aggregate, being from construction or
 257 acquisition by such Phase II Utility.

258 e. Nothing in this subdivision 2 shall prohibit such Phase II Utility from constructing, acquiring, or
 259 entering into agreements to purchase the energy, capacity, and environmental attributes of more than 16,100
 260 megawatts of generating capacity located in the Commonwealth using energy derived from sunlight or
 261 onshore wind, provided the utility receives approval from the Commission pursuant to §§ 56-580 and
 262 56-585.1.

263 3. Nothing in this section shall prohibit a utility from petitioning the Commission to construct or acquire
 264 zero-carbon electricity or from entering into contracts to procure the energy, capacity, and environmental
 265 attributes of zero-carbon electricity generating resources in excess of the requirements in subsection B. The
 266 Commission shall determine whether to approve such petitions on a stand-alone basis pursuant to §§ 56-580
 267 and 56-585.1, provided that the Commission's review shall also consider whether the proposed generating
 268 capacity (i) is necessary to meet the utility's native load, (ii) is likely to lower customer fuel costs, (iii) will
 269 provide economic development opportunities in the Commonwealth, and (iv) serves a need that cannot be
 270 more affordably met with demand-side or energy storage resources.

271 Each Phase I and Phase II Utility shall, at least once every year, conduct a request for proposals for new
 272 solar and wind resources. Such requests shall quantify and describe the utility's need for energy, capacity, or
 273 renewable energy certificates. The requests for proposals shall be publicly announced and made available for
 274 public review on the utility's website at least 45 days prior to the closing of such request for proposals. The
 275 requests for proposals shall provide, at a minimum, the following information: (a) the size, type, and timing
 276 of resources for which the utility anticipates contracting; (b) any minimum thresholds that must be met by
 277 respondents; (c) major assumptions to be used by the utility in the bid evaluation process, including
 278 environmental emission standards; (d) detailed instructions for preparing bids so that bids can be evaluated on
 279 a consistent basis; (e) the preferred general location of additional capacity; and (f) specific information
 280 concerning the factors involved in determining the price and non-price criteria used for selecting winning
 281 bids. A utility may evaluate responses to requests for proposals based on any criteria that it deems reasonable
 282 but shall at a minimum consider the following in its selection process: (1) the status of a particular project's
 283 development; (2) the age of existing generation facilities; (3) the demonstrated financial viability of a project
 284 and the developer; (4) a developer's prior experience in the field; (5) the location and effect on the
 285 transmission grid of a generation facility; (6) benefits to the Commonwealth that are associated with
 286 particular projects, including regional economic development and the use of goods and services from Virginia
 287 businesses; and (7) the environmental impacts of particular resources, including impacts on air quality within
 288 the Commonwealth and the carbon intensity of the utility's generation portfolio.

289 4. In connection with the requirements of this subsection, each Phase I and Phase II Utility shall,
 290 commencing in 2020 and concluding in 2035, submit annually a plan and petition for approval for the
 291 development of new solar and onshore wind generation capacity. Such plan shall reflect, in the aggregate and
 292 over its duration, the requirements of subsection D concerning the allocation percentages for construction or
 293 purchase of such capacity. Such petition shall contain any request for approval to construct such facilities
 294 pursuant to subsection D of § 56-580 and a request for approval or update of a rate adjustment clause
 295 pursuant to subdivision A 6 of § 56-585.1 to recover the costs of such facilities. Such plan shall also include
 296 the utility's plan to meet the energy storage project targets of subsection E, including the goal of installing at
 297 least 10 percent of such energy storage projects behind the meter. In determining whether to approve the
 298 utility's plan and any associated petition requests, the Commission shall determine whether they are
 299 reasonable and prudent and shall give due consideration to (i) the RPS and carbon dioxide reduction
 300 requirements in this section; (ii) the promotion of new renewable generation and energy storage resources
 301 within the Commonwealth, and associated economic development; and (iii) fuel savings projected to be
 302 achieved by the plan. Notwithstanding any other provision of this title, the Commission's final order
 303 regarding any such petition and associated requests shall be entered by the Commission not more than six
 304 months after the date of the filing of such petition.

305 5. If, in any year, a Phase I or Phase II Utility is unable to meet the compliance obligation of the RPS
 306 Program requirements or if the cost of ZECs or RECs necessary to comply with RPS Program requirements
 307 exceeds \$45 per megawatt hour, such supplier shall be obligated to make a deficiency payment equal to \$45

308 for each megawatt-hour shortfall for the year of noncompliance, except that the deficiency payment for any
309 shortfall in procuring RECs for solar, wind, or anaerobic digesters located in the Commonwealth shall be \$75
310 per megawatts hour for resources one megawatt and lower. The amount of any deficiency payment shall
311 increase by one percent annually after 2021. A Phase I or Phase II Utility shall be entitled to recover the costs
312 of such payments as a cost of compliance with the requirements of this subsection pursuant to subdivision A
313 5 d of § 56-585.1. All proceeds from the deficiency payments shall be deposited into an interest-bearing
314 account administered by the Department of Energy. In administering this account, the Department of Energy
315 shall manage the account as follows: (i) 50 percent of total revenue shall be directed to job training programs
316 in historically economically disadvantaged communities; (ii) 16 percent of total revenue shall be directed to energy
317 efficiency measures for public facilities; (iii) 30 percent of total revenue shall be directed to renewable
318 energy programs located in historically economically disadvantaged communities; and (iv) four percent of
319 total revenue shall be directed to administrative costs.

320 For any project constructed pursuant to this subsection or subsection E, a utility shall, subject to a
321 competitive procurement process, procure equipment from a Virginia-based or United States-based
322 manufacturer using materials or product components made in Virginia or the United States, if reasonably
323 available and competitively priced.

324 E. To enhance reliability and performance of the utility's generation and distribution system, each Phase I
325 and Phase II Utility shall petition the Commission for necessary approvals to construct or acquire new,
326 utility-owned energy storage resources.

327 1. By December 31, 2035, each Phase I Utility shall petition the Commission for necessary approvals to
328 construct or acquire 400 megawatts of energy storage capacity. Nothing in this subdivision shall prohibit a
329 Phase I Utility from constructing or acquiring more than 400 megawatts of energy storage, provided that the
330 utility receives approval from the Commission pursuant to §§ 56-580 and 56-585.1.

331 2. By December 31, 2035, each Phase II Utility shall petition the Commission for necessary approvals to
332 construct or acquire 2,700 megawatts of energy storage capacity. Nothing in this subdivision shall prohibit a
333 Phase II Utility from constructing or acquiring more than 2,700 megawatts of energy storage, provided that the
334 utility receives approval from the Commission pursuant to §§ 56-580 and 56-585.1.

335 3. No single energy storage project shall exceed 500 megawatts in size, except that a Phase II Utility may
336 procure a single energy storage project up to 800 megawatts.

337 4. All energy storage projects procured pursuant to this subsection shall meet the competitive procurement
338 protocols established in subdivision D 3.

339 5. After July 1, 2020, at least 35 percent of the energy storage facilities placed into service shall be (i)
340 purchased by the public utility from a party other than the public utility or (ii) owned by a party other than a
341 public utility, with the capacity from such facilities sold to the public utility. By January 1, 2021, the
342 Commission shall adopt regulations to achieve the deployment of energy storage for the Commonwealth
343 required in subdivisions 1 and 2, including regulations that set interim targets and update existing utility
344 planning and procurement rules. The regulations shall include programs and mechanisms to deploy energy
345 storage, including competitive solicitations, behind-the-meter incentives, non-wires alternatives programs,
346 and peak demand reduction programs.

347 F. *To ensure that the Commonwealth's energy demands are met with clean and reliable power, each*
348 *Phase I and Phase II Utility shall petition the Commission for necessary approvals to construct or acquire*
349 *new zero-carbon electricity. Nothing in this section shall prohibit a Phase I or Phase II Utility from*
350 *petitioning the Commission to construct or acquire zero-carbon electricity or from entering contracts to*
351 *procure the energy, capacity, and environmental attributes of zero-carbon electricity generating resources in*
352 *excess of the requirements of this section.*

353 1. *From January 1, 2035, to December 31, 2045, each Phase I Utility shall petition the Commission for*
354 *necessary approvals to construct or acquire energy, capacity, and environmental attributes of 1,600*
355 *megawatts of generating capacity using zero-carbon electricity.*

356 2. *From January 1, 2035, to December 31, 2045, each Phase II Utility shall petition the Commission for*
357 *necessary approvals to construct or acquire energy, capacity, and environmental attributes of 5,000*
358 *megawatts of generating capacity using zero-carbon electricity.*

359 3. *At least 50 percent of the zero-carbon electricity placed into service under this subsection shall be (i)*
360 *purchased by the utility from a party other than the utility or (ii) owned by a party other than the utility, with*
361 *the energy, capacity, and environmental attributes from such facilities sold to the utility.*

362 G. All costs incurred by a Phase I or Phase II Utility related to compliance with the requirements of this
363 section or pursuant to § 56-585.1:11, including (i) costs of generation facilities powered by sunlight or
364 onshore or offshore wind, or energy storage facilities, that are constructed or acquired by a Phase I or Phase II
365 Utility after July 1, 2020, (ii) costs of capacity, energy, or environmental attributes from generation facilities
366 powered by sunlight or onshore or offshore wind, or falling water, or energy storage facilities purchased by
367 the utility from persons other than the utility through agreements after July 1, 2020, and (iii) all other costs of
368 compliance, including costs associated with the purchase of RECs associated with RPS Program
369 requirements pursuant to this section shall be recovered from all retail customers in the service territory of a

370 Phase I or Phase II Utility as a non-bypassable charge, irrespective of the generation supplier of such
 371 customer, except (a) as provided in subsection **G H** for an accelerated renewable energy buyer or (b) as
 372 provided in subdivision C 3 of § 56-585.1:11, with respect to the costs of an offshore wind generation
 373 facility, for a PIPP eligible utility customer or an advanced clean energy buyer or qualifying large general
 374 service customer, as those terms are defined in § 56-585.1:11. If a Phase I or Phase II Utility serves
 375 customers in more than one jurisdiction, such utility shall recover all of the costs of compliance with the RPS
 376 Program requirements from its Virginia customers through the applicable cost recovery mechanism, and all
 377 associated energy, capacity, and environmental attributes shall be assigned to Virginia to the extent that such
 378 costs are requested but not recovered from any system customers outside the Commonwealth.

379 By September 1, 2020, the Commission shall direct the initiation of a proceeding for each Phase I and
 380 Phase II Utility to review and determine the amount of such costs, net of benefits, that should be allocated to
 381 retail customers within the utility's service territory which have elected to receive electric supply service from
 382 a supplier of electric energy other than the utility, and shall direct that tariff provisions be implemented to
 383 recover those costs from such customers beginning no later than January 1, 2021. Thereafter, such charges
 384 and tariff provisions shall be updated and trued up by the utility on an annual basis, subject to continuing
 385 review and approval by the Commission.

386 **G. H.** 1. An accelerated renewable energy buyer may contract with a Phase I or Phase II Utility, or a
 387 person other than a Phase I or Phase II Utility, to obtain (i) RECs from RPS eligible resources *or;* (ii) bundled
 388 capacity, energy, and RECs from solar or, wind, or zero-carbon electricity generation resources located
 389 within the PJM region and initially placed in commercial operation after January 1, 2015, including any
 390 contract with a utility for such generation resources that does not allocate the cost of such resources to or
 391 recover the cost of such resources from any other customers of the utility that have not voluntarily agreed to
 392 pay such cost; *or* (iii) *zero-carbon electricity generation resources located in the PJM region and placed into*
 393 *service on or after January 1, 2028.* Such an accelerated renewable energy buyer may offset all or a portion
 394 of its electric load for purposes of RPS compliance through such arrangements. An accelerated renewable
 395 energy buyer shall be exempt from the assignment of non-bypassable RPS compliance costs pursuant to
 396 subsection **F G**, with the exception of the costs of an offshore wind generating facility pursuant to
 397 § 56-585.1:11, based on the amount of RECs obtained pursuant to this subsection in proportion to the
 398 customer's total electric energy consumption, on an annual basis. An accelerated renewable energy buyer may
 399 also contract with a Phase I or Phase II Utility, or a person other than a Phase I or Phase II Utility, to obtain
 400 capacity from energy storage facilities located within the network service area of the utility pursuant to this
 401 subsection, provided that the costs of such resources are not recovered from any of the utility's customers
 402 who have not voluntarily agreed to pay for such costs. Such accelerated renewable energy buyer shall be
 403 exempt from the assignment of non-bypassable RPS Program compliance costs specifically associated with
 404 energy storage facilities pursuant to this subsection in proportion to the customer's total capacity demand on
 405 an annual basis. An accelerated renewable energy buyer obtaining RECs only shall not be exempt from costs
 406 related to procurement of new solar or onshore wind generation capacity, energy, or environmental attributes,
 407 or energy storage facilities, by the utility pursuant to subsections D and E, however, an accelerated renewable
 408 energy buyer that is a customer of a Phase II Utility and was subscribed, as of March 1, 2020, to a voluntary
 409 companion experimental tariff offering of the utility for the purchase of renewable attributes from renewable
 410 energy facilities that requires a renewable facilities agreement and the purchase of a minimum of 2,000
 411 renewable attributes annually, shall be exempt from allocation of the net costs related to procurement of new
 412 solar or onshore wind generation capacity, energy, or environmental attributes, or energy storage facilities, by
 413 the utility pursuant to subsections D and E, based on the amount of RECs associated with the customer's
 414 renewable facilities agreements associated with such tariff offering as of that date in proportion to the
 415 customer's total electric energy consumption, on an annual basis. To the extent that an accelerated renewable
 416 energy buyer contracts for the capacity of new solar or wind generation resources or energy storage facilities
 417 pursuant to this subsection, the aggregate amount of such nameplate capacity shall be offset from the utility's
 418 procurement requirements pursuant to subsection D. All RECs associated with contracts entered into by an
 419 accelerated renewable energy buyer with the utility, or a person other than the utility, for an RPS Program
 420 shall not be credited to the utility's compliance with its RPS requirements, and the calculation of the utility's
 421 RPS Program requirements shall not include the electric load covered by customers certified as accelerated
 422 renewable energy buyers.

423 2. Each Phase I or Phase II Utility shall certify, and verify as necessary, to the Commission that the
 424 accelerated renewable energy buyer has satisfied the exemption requirements of this subsection for each year,
 425 or an accelerated renewable energy buyer may choose to certify satisfaction of this exemption by reporting to
 426 the Commission individually. The Commission may promulgate such rules and regulations as may be
 427 necessary to implement the provisions of this subsection.

428 3. Provided that no incremental costs associated with any contract between a Phase I or Phase II Utility
 429 and an accelerated renewable energy buyer is allocated to or recovered from any other customer of the utility,
 430 any such contract with an accelerated renewable energy buyer that is a jurisdictional customer of the utility
 431 shall not be deemed a special rate or contract requiring Commission approval pursuant to § 56-235.2.

432 4. The State Corporation Commission shall ensure that any distribution and transmission costs associated
433 with new energy generation resources procured pursuant to subsection ~~G~~ of § 56-585.5 of the Code of
434 Virginia, as amended by this act, ~~F~~ are justly and reasonably allocated.

435 *H. I.* No customer of a Phase II Utility with a peak demand in excess of 100 megawatts in 2019 that
436 elected pursuant to subdivision A 3 of § 56-577 to purchase electric energy from a competitive service
437 provider prior to April 1, 2019, shall be allocated any non-bypassable charges pursuant to subsection ~~F~~ G for
438 such period that the customer is not purchasing electric energy from the utility, and such customer's electric
439 load shall not be included in the utility's RPS Program requirements. No customer of a Phase I Utility that
440 elected pursuant to subdivision A 3 of § 56-577 to purchase electric energy from a competitive service
441 provider prior to February 1, 2019, shall be allocated any non-bypassable charges pursuant to subsection ~~F~~ G
442 for such period that the customer is not purchasing electric energy from the utility, and such customer's
443 electric load shall not be included in the utility's RPS Program requirements.

444 *I. J.* In any petition by a Phase I or Phase II Utility for a certificate of public convenience and necessity to
445 construct and operate an electrical generating facility that generates electric energy derived from sunlight
446 submitted pursuant to § 56-580, such utility shall demonstrate that the proposed facility was subject to
447 competitive procurement or solicitation as set forth in subdivision D 3.

448 *J. K.* Notwithstanding any contrary provision of law, for the purposes of this section, any falling water
449 generation facility located in the Commonwealth and commencing commercial operations prior to July 1,
450 2024, shall be considered a renewable energy portfolio standard (RPS) eligible source.

451 *K. L.* Nothing in this section shall apply to any entity organized under Chapter 9.1 (§ 56-231.15 et seq.).

452 *L. M.* The Commission shall adopt such rules and regulations as may be necessary to implement the
453 provisions of this section, including a requirement that participants verify whether the RPS Program
454 requirements are met in accordance with this section.

455 **2. That no later than January 1, 2028, the State Corporation Commission shall adopt regulations to**
456 **achieve the deployment of zero-carbon electricity for the Commonwealth as required in subsection F of**
457 **§ 56-585.5 of the Code of Virginia, as amended by this act, including regulations that set interim**
458 **targets and update existing utility planning and procurement rules.**

459 **3. That the State Corporation Commission shall initiate a proceeding to determine whether the targets**
460 **in subdivisions 1 and 2 of subsection F of § 56-585.5 of the Code of Virginia, as amended by this act,**
461 **are appropriate in light of any changes to anticipated energy load growth in the Commonwealth. In**
462 **conducting such proceeding, the Commission may recommend reducing the targets in subdivisions 1**
463 **and 2 of subsection F of § 56-585.5 of the Code of Virginia, as amended by this act. The Commission**
464 **shall enter its final order in such proceeding, including any recommendations, no later than July 1,**
465 **2030.**
