**Be it enacted by the General Assembly of Virginia:**

**1. That §§ 3.2-6500 and 58.1-1708 of the Code of Virginia are amended and reenacted and that the Code of Virginia is amended by adding sections numbered 3.2-6504.2, 3.2-6504.3, 3.2-6504.4, and 58.1-1707.1 as follows:**

**§ 3.2-6500. Definitions.**

As used in this chapter unless the context requires a different meaning:

"Abandon" means to desert, forsake, or absolutely give up an animal without having secured another owner or custodian for the animal or by failing to provide the elements of basic care as set forth in § 3.2-6503 for a period of four consecutive days.

"Adequate care" or "care" means the responsible practice of good animal husbandry, handling, production, management, confinement, feeding, watering, protection, shelter, transportation, treatment, and, when necessary, euthanasia, appropriate for the age, species, condition, size and type of the animal and the provision of veterinary care when needed to prevent suffering or impairment of health.

"Adequate exercise" or "exercise" means the opportunity for the animal to move sufficiently to maintain normal muscle tone and mass for the age, species, size, and condition of the animal.

"Adequate feed" means access to and the provision of food that is of sufficient quantity and nutritive value to maintain each animal in good health; is accessible to each animal; is prepared so as to permit ease of consumption for the age, species, condition, size and type of each animal; is provided in a clean and sanitary manner; is placed so as to minimize contamination by excrement and pests; and is provided at suitable intervals for the species, age, and condition of the animal, but at least once daily, except as prescribed by a veterinarian or as dictated by naturally occurring states of hibernation or fasting normal for the species.

"Adequate shelter" means provision of and access to shelter that is suitable for the species, age, condition,

size, and type of each animal; provides adequate space for each animal; is safe and protects each animal from injury, rain, sleet, snow, hail, direct sunlight, the adverse effects of heat or cold, physical suffering, and impairment of health; is properly lighted; is properly cleaned; enables each animal to be clean and dry, except when detrimental to the species; during hot weather, is properly shaded and does not readily conduct heat; during cold weather, has a windbreak at its entrance and provides a quantity of bedding material consisting of hay, cedar shavings, or the equivalent that is sufficient to protect the animal from cold and promote the retention of body heat; and, for dogs and cats, provides a solid surface, resting platform, pad, floormat, or similar device that is large enough for the animal to lie on in a normal manner and can be maintained in a sanitary manner. Under this chapter, shelters whose wire, grid, or slat floors (i) permit the animals' feet to pass through the openings, (ii) sag under the animals' weight, or (iii) otherwise do not protect the animals' feet or toes from injury are not adequate shelter. The outdoor tethering of an animal shall not constitute the provision of adequate shelter (a) unless the animal is safe from predators and well suited and well equipped to tolerate its environment; (b) during the effective period for a hurricane warning or tropical storm warning issued for the area by the National Weather Service; or (c) (1) during a heat advisory issued by a local or state authority, (2) when the actual or effective outdoor temperature is 85 degrees Fahrenheit or higher or 32 degrees Fahrenheit or lower, or (3) during the effective period for a severe weather warning issued for the area by the National Weather Service, including a winter storm, tornado, or severe thunderstorm warning, unless an animal control officer, having inspected an animal's individual circumstances in clause (c) (1), (2), or (3), has determined the animal to be safe from predators and well suited and well equipped to tolerate its environment.

"Adequate space" means sufficient space to allow each animal to (i) easily stand, sit, lie, turn about, and make all other normal body movements in a comfortable, normal position for the animal and (ii) interact safely with other animals in the enclosure. When an animal is tethered, "adequate space" means that the tether to which the animal is attached permits the above actions and is appropriate to the age and size of the animal; is attached to the animal by a properly applied collar, halter, or harness that is configured so as to protect the animal from injury and prevent the animal or tether from becoming entangled with other objects or animals, or from extending over an object or edge that could result in the strangulation or injury of the animal; is at least 15 feet in length or four times the length of the animal, as measured from the tip of its nose to the base of its tail, whichever is greater, except when the animal is being walked on a leash or is attached by a tether to

a lead line or when an animal control officer, having inspected an animal's individual circumstances, has determined that in such an individual case, a tether of at least 10 feet or three times the length of the animal, but shorter than 15 feet or four times the length of the animal, makes the animal more safe, more suited, and better equipped to tolerate its environment than a longer tether; does not, by its material, size, or weight or any other characteristic, cause injury or pain to the animal; does not weigh more than one-tenth of the animal's body weight; and does not have weights or other heavy objects attached to it. The walking of an animal on a leash by its owner shall not constitute the tethering of the animal for the purpose of this definition. When freedom of movement would endanger the animal, temporarily and appropriately restricting movement of the animal according to professionally accepted standards for the species is considered provision of adequate space. The provisions of this definition that relate to tethering shall not apply to agricultural animals.

"Adequate water" means provision of and access to clean, fresh, potable water of a drinkable temperature that is provided in a suitable manner, in sufficient volume, and at suitable intervals appropriate for the weather and temperature, to maintain normal hydration for the age, species, condition, size and type of each animal, except as prescribed by a veterinarian or as dictated by naturally occurring states of hibernation or fasting normal for the species; and is provided in clean, durable receptacles that are accessible to each animal and are placed so as to minimize contamination of the water by excrement and pests or an alternative source of hydration consistent with generally accepted husbandry practices.
