

26109044D

HOUSE BILL NO. 549

AMENDMENT IN THE NATURE OF A SUBSTITUTE
(Proposed by the Senate Committee on Local Government
on March 2, 2026)

(Patrons Prior to Substitute—Delegates Hope and Seibold [HB 995])

A BILL to amend and reenact § 15.2-961.1 of the Code of Virginia, relating to conservation of trees during land development process; Planning District 8; minimum tree canopy or cover percentages requirements after development.

Be it enacted by the General Assembly of Virginia:

1. That § 15.2-961.1 of the Code of Virginia is amended and reenacted as follows:

§ 15.2-961.1. Conservation of trees during land development process in localities belonging to a nonattainment area for air quality standards.

A. For purposes of this section, "tree canopy" or "tree cover" includes all areas of canopy coverage by self-supporting and healthy woody plant material exceeding five feet in height, and the extent of planted tree canopy at 20-years maturity.

B. Any locality within Planning District 8 that meets the population density criteria of subsection A of § 15.2-961 and is classified as an eight-hour nonattainment area for ozone under the federal Clean Air Act and Amendments of 1990, in effect as of July 1, 2008, may adopt an ordinance providing for the conservation of trees during the land development process pursuant to the provisions of this section. In no event shall any local tree conservation ordinance adopted pursuant to this section also impose the tree replacement provisions of § 15.2-961.

C. The ordinance shall require that the site plan for any subdivision or development provide for the preservation or replacement of trees on the development site such that the minimum tree canopy or tree cover percentage 20 years after development is projected to be as follows:

1. Ten percent tree canopy for a site zoned business, commercial, or industrial;
2. Ten percent tree canopy for a residential site zoned 20 or more units per acre;
3. Fifteen percent tree canopy for a residential site zoned more than eight but less than 20 units per acre;
4. Twenty percent tree canopy for a residential site zoned more than four but not more than eight units per acre;
5. Twenty-five percent tree canopy for a residential site zoned more than two but not more than four units per acre; and
6. Thirty percent tree canopy for a residential site zoned two or fewer units per acre.

However, the ordinance may also require at 10 years the minimum tree canopies or covers set out in this subsection.

In meeting these percentages, (i) the ordinance shall first emphasize the preservation of existing tree canopy where that canopy meets local standards for health and structural condition, and where it is feasible to do so within the framework of design standards and densities allowed by the local zoning and other development ordinances; and (ii) second, where it is not feasible in whole or in part for any of the justifications listed in subsection E to preserve existing canopy in the required percentages listed above, the ordinance shall provide for the planting of new trees to meet the required percentages.

D. Except as provided in subsection E, the percentage of the site covered by tree canopy at the time of plan submission shall equate to the minimum portion of the requirements identified in subsection C that shall be provided through tree preservation. This portion of the canopy requirements shall be identified as the "tree preservation target" and shall be included in site plan calculations or narratives demonstrating how the overall requirements of subsection C have been met.

E. The ordinance shall provide deviations, in whole or in part, from the tree preservation target defined in subsection D under the following conditions:

1. Meeting the preservation target would prevent the development of uses and densities otherwise allowed by the locality's zoning or development ordinance.
2. The predevelopment condition of vegetation does not meet the locality's standards for health and structural condition.
3. Construction activities could be reasonably expected to impact existing trees to the extent that they would not likely survive in a healthy and structurally sound manner. This includes activities that would cause direct physical damage to the trees, including root systems, or cause environmental changes that could result in or predispose the trees to structural and health problems.

If, in the opinion of the developer, the project cannot meet the tree preservation target due to the conditions described in subdivision 1, 2, or 3, the developer may request a deviation from the preservation requirement in subsection D. In the request for deviation, the developer shall provide a letter to the locality that provides justification for the deviation, describes how the deviation is the minimum necessary to afford

60 relief, and describes how the requirements of subsection C will be met through tree planting or a tree canopy
61 bank or fund established by the locality. Proposed deviations shall be reviewed by the locality's urban
62 forester, arborist, or equivalent in consultation with the locality's land development or licensed professional
63 civil engineering review staff. The locality may propose an alternative site design based upon adopted land
64 development practices and sound vegetation management practices that take into account the relationship
65 between the cost of conservation and the benefits of the trees to be preserved as described in ANSI A300
66 (Part 5) — 2005 Management: Tree, Shrub, and Other Woody Plant Maintenance — Standard Practices,
67 Management of Trees and Shrubs During Site Planning, Site Development, and Construction, Annex A,
68 A-1.5, Cost Benefits Analysis (or the latest version of this standard). The developer shall consider the
69 alternative and redesign the plan accordingly, or elect to satisfy the unmet portion of the preservation
70 threshold through on-site tree planting or through the off-site planting mechanisms identified in subsection G,
71 so long as the developer provides the locality with an explanation of why the alternative design
72 recommendations were rejected. Letters of explanation from the developer shall be prepared and certified by
73 a licensed professional engineer as defined in § 54.1-400. If arboricultural issues are part of explanation then
74 the letter shall be signed by a Certified Arborist who has taken and passed the certification examination
75 sponsored by the International Society of Arboriculture and who maintains a valid certification status or by a
76 Registered Consulting Arborist as designated by the American Society of Consulting Arborists. If
77 arboricultural issues are the sole subject of the letter of explanation then certification by a licensed
78 professional engineer shall not be required.

79 F. The ordinance shall provide for deviations of the overall canopy requirements set forth in subsection C
80 to allow for the preservation of wetlands, the development of farm land or other areas previously devoid of
81 healthy and/or suitable tree canopy, or where the strict application of the requirements would result in
82 unnecessary or unreasonable hardship to the developer.

83 G. The ordinance shall provide for the establishment of a tree canopy bank or fund whereby any portion
84 of the tree canopy requirement that cannot be met on-site may be met through off-site tree preservation or tree
85 planting efforts. Such provisions may be offered where it can be demonstrated that application of the
86 requirements of subsection C would cause irresolvable conflicts with other local site development
87 requirements, standards, or comprehensive planning goals, where sites or portions of sites lack sufficient
88 space for future tree growth, where planting spaces will not provide adequate space for healthy root
89 development, where trees will cause unavoidable conflicts with underground or overhead utilities, or where it
90 can be demonstrated that trees are likely to cause damage to public infrastructure. The ordinance may utilize
91 any of the following off-site canopy establishment mechanisms:

92 1. A tree canopy bank may be established in order for the locality to facilitate off-site tree preservation,
93 tree planting, stream bank, and riparian restoration projects. Banking efforts shall provide tree canopy that is
94 preserved in perpetuity through conservation easements, deed restrictions, or similar protective mechanisms
95 acceptable to the locality. Projects used in off-site banking will meet the same ordinance standards
96 established for on-site tree canopy; however, the locality may also require the submission of five-year
97 management plans and funds to ensure the execution of maintenance and management obligations identified
98 in those plans. Any such bank shall occur within the same nonattainment area in which the locality approving
99 the tree banking is situated.

100 2. A tree canopy fund may be established to act as a fiscal mechanism to collect, manage, and disburse
101 fees collected from developers that cannot provide full canopy requirements on-site. The locality may use this
102 fund directly to plant and maintain trees on public or private property, or the locality may elect to disburse
103 this fund to community-based organizations exempt from taxation under § 501(c)(3) of the Internal Revenue
104 Code with tree planting, stewardship, or community beautification missions that benefit the community at
105 large. For purposes of establishing consistent and predictable fees, the ordinance shall establish cost units that
106 are based on average costs of two-inch caliper nursery stock trees. Any funds collected by localities for these
107 purposes shall be spent within a five-year period established by the collection date.

108 H. The following uses shall be exempt from the requirements of any ordinance promulgated under this
109 section: bona fide silvicultural activity as defined by § 10.1-1181.1 and the areas of sites included in lakes,
110 ponds, and the normal water elevation area of stormwater retention facilities. The ordinance shall modify the
111 canopy requirements of dedicated school sites, playing fields, and other nonwooded active recreation areas by
112 allowing these and other facilities and uses of a similar nature to provide 10 percent tree canopy 20 years
113 after development.

114 I. 1. In recognition of the added benefits of tree preservation, the ordinance shall provide for an additional
115 tree canopy credit of up to one and one-quarter times the canopy area at the time of plan submission for
116 individual trees or the coalesced canopy of forested areas preserved from the predevelopment tree canopy.

117 2. The following additional credits may be provided in the ordinance in connection with tree preservation:

118 a. The ordinance may provide canopy credits of up to (i) one and one-half times the actual canopy area for
119 the preservation of forest communities that achieve environmental, ecological, and wildlife conservation
120 objectives set by the locality and (ii) two times the actual canopy credits if a site developer provides a stand
121 assessment before development plans are created, for review by the local jurisdiction, and protects identified

122 trees for conservation on the submitted site plans. The ordinance may establish minimal area, dimensional
 123 and viability standards as prerequisites for the application of credits. Forest communities shall be identified
 124 using the nomenclature of either the federal National Vegetation Classification System (FGDC-STD-005, or
 125 latest version) or the Natural Communities of Virginia Classification of Ecological Community Groups,
 126 Second Approximation (Version 2.2, or latest version).

127 b. The ordinance may provide canopy credits of up to three times the actual canopy area of trees that are
 128 officially designated for preservation in conjunction with local tree conservation ordinances based on the
 129 authority granted by § 10.1-1127.1.

130 J. The following additional credits shall be provided in the ordinance in connection with tree planting:

131 1. The ordinance shall provide canopy credits of one and one-half the area normally projected for trees
 132 planted to absorb or intercept air pollutants, tree species that produce lower levels of reactive volatile organic
 133 compounds, or trees that act to reduce air pollution or greenhouse gas emissions by conserving the energy
 134 used to cool and heat buildings.

135 2. The ordinance shall provide canopy credits of one and one-quarter the area normally projected for trees
 136 planted for water quality-related reforestation or afforestation projects, and for trees planted in low-impact
 137 development and bioretention water quality facilities. The low-impact development practices and designs
 138 shall conform to local standards in order for these supplemental credits to apply.

139 3. The ordinance shall provide canopy credits of one and one-half the area normally projected for native
 140 tree species planted to provide food, nesting, habitat, and migration opportunities for wildlife. These canopy
 141 credits may also apply to cultivars of native species if the locality determines that such a cultivar is capable of
 142 providing the same type and extent of wildlife benefit as the species it is derived from.

143 4. The ordinance shall provide canopy credits of one and one-half the area normally projected for use of
 144 native tree species that are propagated from seed or tissue collected within the mid-Atlantic region.

145 5. The ordinance shall provide canopy credits of one and one-quarter the area normally projected for the
 146 use of cultivars or varieties that develop desirable growth and structural patterns, resist decay organisms and
 147 the development of cavities, show high levels of resistance to disease or insect infestations, or exhibit high
 148 survival rates in harsh urban environments.

149 K. Tree preservation areas and individual trees may not receive more than one application of additional
 150 canopy credits provided in subsection I. Individual trees planted to meet these requirements may not receive
 151 more than two categories of additional canopy credits provided in subsection J. Canopy credits will only be
 152 given to trees with trunks that are fully located on the development site, or in the case of tree banking projects
 153 only to trees with trunks located fully within easements or other areas protected by deed restrictions listed in
 154 subsection G.

155 L. All trees planted for tree cover credits shall meet the specifications of the American Association of
 156 Nurserymen and shall be planted in accordance with the publication entitled "Tree and Shrub Planting
 157 Guidelines," published by the Virginia Cooperative Extension.

158 M. In order to provide higher levels of biodiversity and to minimize the spread of pests and diseases, or to
 159 limit the use of species that cause negative impacts to native plant communities, cause damage to nearby
 160 structures, or possess inherent physiological traits that prone trees to structural failure, the ordinance may
 161 designate species that cannot be used to meet tree canopy requirements or designate species that will only
 162 receive partial 20-year tree canopy credits.

163 N. The locality may allow the use of tree seedlings for meeting tree canopy requirements in large open
 164 spaces, low-density residential settings, or in low-impact development reforestation/afforestation projects. In
 165 these cases, the ordinance shall allow the ground surface area of seedling planting areas to equate to a 20-year
 166 canopy credit area. Tree seedling plantings will be comprised of native species and will be planted in
 167 densities that equate to 400 seedlings per acre, or in densities specified by low-impact development designs
 168 approved by the locality. The locality may set standards for seedling mortality rates and replacement
 169 procedures if unacceptable rates of mortality occur. The locality may elect to allow native woody shrubs or
 170 native woody seed mix to substitute for tree species as long as these treatments do not exceed 33 percent of
 171 the overall seedling planting area. The number of a single species may not exceed 10 percent of the overall
 172 number of trees or shrubs planted to meet the provisions of this subsection.

173 O. The following process shall be used to demonstrate achievement of the required percentage of tree
 174 canopy listed in subsection C:

175 1. The site plan shall graphically delineate the edges of predevelopment tree canopy, the proposed limits
 176 of disturbance on grading or erosion and sedimentation control plans, and the location of tree protective
 177 fencing or other tree protective devices allowed in the Virginia Erosion and Sediment Control Handbook.

178 2. Site plans proposing modification to tree canopy requirements or claiming supplemental tree canopy
 179 credits will require a text narrative.

180 3. The site plan shall include the 20-year tree canopy calculations on a worksheet provided by the locality.

181 4. Site plans requiring tree planting shall provide a planting schedule that provides botanical and common
 182 names of trees, the number of trees being planted, the total of tree canopy area given to each species, variety

183 or cultivars planted, total of tree canopy area that will be provided by all trees, planting sizes, and associated
184 planting specifications. The site plan will also provide a landscape plan that delineates where the trees shall
185 be planted.

186 P. The ordinance shall provide a list of commercially available tree species, varieties, and cultivars that
187 are capable of thriving in the locality's climate and ranges of planting environments. The ordinance will also
188 provide a 20-year tree canopy area credit for each tree. The amount of tree canopy area credited to individual
189 tree species, varieties, and cultivars 20 years after they are planted shall be based on references published or
190 endorsed by Virginia academic institutions such as the Virginia Polytechnic Institute and State University and
191 accepted by urban foresters, arborists, and horticulturalists as being accurate for the growing conditions and
192 climate of the locality.

193 Q. The ordinance shall establish standards of health and structural condition of existing trees and
194 associated plant communities to be preserved. The ordinance may also identify standards for removal of trees
195 or portions of trees that are dead, dying, or hazardous due to construction impacts. Such removal standards
196 may allow for the retention of trunk snags where the locality determines that these may provide habitat or
197 other wildlife benefits and do not represent a hazardous condition. In the event that existing tree canopy
198 proposed to be preserved for tree canopy credits dies or must be removed because it represents a hazard, the
199 locality may require the developer to remove the tree, or a portion of the tree and to replace the missing
200 canopy area by the planting of nursery stock trees, or if a viable alternative, by tree seedlings. Existing trees
201 that have been granted credits will be replaced with canopy area determined using the same supplemental
202 credit multipliers as originally granted for that canopy area.

203 R. Penalties for violation of ordinances adopted pursuant to this section shall be the same as those
204 applicable to violations of zoning ordinances of the locality.

205 S. ~~In no event shall any~~ *Except as otherwise provided in this section, no* local tree conservation ordinance
206 adopted pursuant to this section *shall* exceed the requirements set forth herein; however, any local ordinance
207 adopted pursuant to the provisions of § 15.2-961 prior to July 1, 1990, may adopt the tree conservation
208 provisions of this section based on 10-year minimum tree canopy requirements.

209 T. Nothing in this section shall invalidate any local ordinance adopted pursuant to § 15.2-961.

210 U. Nothing in this section shall prohibit or unreasonably limit silvicultural practices in accordance with
211 § 10.1-1126.1.
